Example of scoring:

If an exam has a total of 43 questions and the student gets 28 correct of the 43 questions, the 28, correct ones are divided among the total of the exam questions ($28/43 = 65\%$). The final grade would be 65%. If the grade total goes above 5 the porting is rounded. Example: 0656, it would be 66%.

Final Mock Exams (100 Questions)			
A 75% is required on both Exams in order to submit an application with the BBC.
